

Excel Electronic Health Record Consulting

Meaningful experience with the Revenue Cycle modules taking you to the next level

Excel Healthcare Group's team has assisted healthcare organizations prepare, design, and implement the MEDITECH Electronic Record suite of applications: Community Wide Scheduling, Admissions, Health Information Management, Quality Management, Utilization Review, and Scanning/Medical Record Management. Our team has worked with the scheduling, registration, health information management, and quality management department teams to build the entire Electronic Record suite of dictionaries with streamlined workflows and seamless integration in mind. We have worked with the MEDITECH preferred vendor systems for integration with coding, eligibility, forms, transcription and other Third Party Applications to provide streamlined integration to the MEDITECH HCIS.

Excel has unsurpassed expertise in helping you understand and develop MEDITECH's Health Information Management in conjunction with facility and Billing/Accounts Receivable database settings to be an exceptionally secure system. This is accomplished with role based user provisioning as a priority.

Excel consultants can also lead you in conversion processes. Our team has experience with Master Patient Index and Demo Recall conversions, as well as Abstract Data, Radiology Exam History, and Scanned Images.

REVENUE CYCLE DESIGN AND INTEGRATION

Our consultants have experience with multiple implementations; assessing, designing, implementing, and optimizing the Revenue Cycle modules. This experience will assist the organization in building the tests and products necessary for efficient processes within Community Wide Scheduling, Admissions, Health Information Management, Quality Management, Utilization Review, and Scanning/Medical Record Management. This includes building toward seamless integration with all neighboring clinical and ancillary applications.

INTERFACE CONNECTIONS

We have a high level of experience in working with eligibility, coding and reimbursement, forms vendor and other third party application interfaces that will assist the business departments with their connection needs into the Electronic Health Record. Once all interfaces are identified, we will assist with set-up for device and server configurations required to achieve successful integration with the MEDITECH HCIS.

WORKFLOW OPTIMIZATION

Once the system is built to business requirement specifications, we will assist with all necessary validation exercises. This includes integrated testing using specific scenarios that are representative of real-life workflows to ensure process and workflow optimization in the new system.

COMPLIANCE

Excel will assess your current system and workflows in preparing your organization to build the system to meet all regulatory compliance standards, including HIPAA compliance.
