

## CS 5.X and 6.0 Experiences

### DRUG DESIGN

Our consultants have experience with multiple implementations, assessing, designing, implementing, and optimizing the pharmacy (PHA) module. This experience will assist the organization in building the medications with Ambulatory Order Management (AOM), Computerized Physician Order Entry (CPOE), Electronic Medication Administration Record (e-MAR), and Electronic Prescribing (e-RX).

### FORMULARY SERVICE VENDOR

We have the experience working with First Data Bank that will assist the Pharmacy department with their formulary and AOM drug file. Once the formulary service vendor (FSV) is loaded, Excel will assist in the testing of interaction and allergy checking.

### ELECTRONIC PRESCRIPTION

There are very few hospitals that have fully integrated the DrFirst product into the Meditech environment. Excel has been fortunate enough to have worked with DrFirst, Meditech, and LSS to integrate this product.

### AMBULATORY ORDER MANAGEMENT

It is a fine balance in preparing the AOM drug dictionary. Excel has assisted organizations in preparing the drug dictionary for the clinician to record reported medications, robust enough for Dr First, and intuitive enough to win the physician.

## Meaningful experience with the Pharmacy module to take you to the next level

Excel Healthcare Group, Inc has a team of consultants that have assisted healthcare organizations prepare, design, and implement the Meditech Pharmacy module. Our team has worked with the physician, nurse, and pharmacist to build the drug dictionary with full CPOE in mind. We have the expertise to guide the hospital and the clinics with the AOM drug dictionary to prepare for future for electronic prescription services such as the DrFirst product.

Excel will assess your current system and prepare the organization to build the drug dictionary with TallMan lettering, electronic medication administration record, and what the clinician will see on the label and the electronic record.

Our consultants have the expertise with PYXIS assessment, integration, testing, and validation. We have managed the project timeline to have this functionality during the testing phase.
