

Excel Revenue Cycle Consulting

REVENUE CYCLE DESIGN AND INTEGRATION

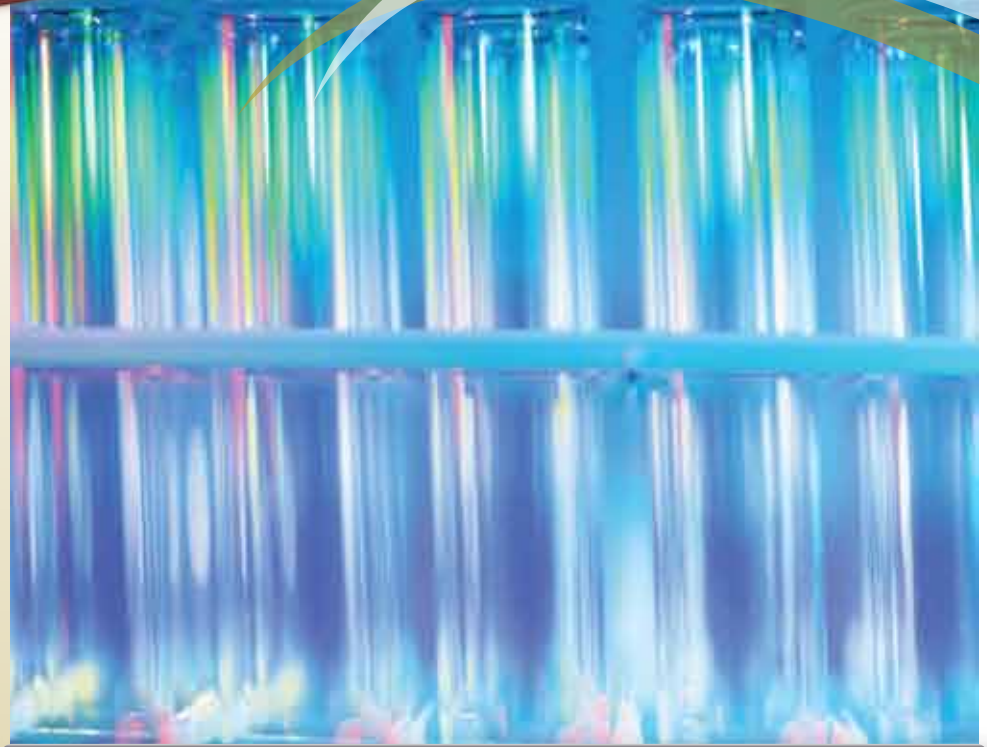

Our consultants have experience with multiple implementations; assessing, designing, implementing, and optimizing the Revenue Cycle modules. This experience will assist the organization in building the tests and products necessary for efficient processes within Community Wide Scheduling, Authorization Referral Management, Admissions, Abstracting, and Billing/Accounts Receivable. This includes building toward seamless integration with all neighboring clinical and ancillary applications.

INTERFACE CONNECTIONS

We have the experience working with multiple eligibility (Passport and SSI e-verify), coding and reimbursement (3M and Quantim), forms vendor (Access eforms and FormsFast) and other Third Party Application interfaces that will assist the business departments with their connection needs. Once all interfaces are identified, we will assist with set-up for device and server configurations required to achieve successful integration with the MEDITECH HCIS.

WORKFLOW OPTIMIZATION

Upon building the system to business requirement specifications, we will assist with all necessary validation exercises. This includes integrated testing using specific scenarios that are representative of real-life workflows to ensure process and workflow optimization. Improved workflow equals improved accuracy in billing and opportunity for managing claim denials.

Meaningful experience with the Revenue Cycle modules taking you to the next level

Excel Healthcare Group's team of consultants has assisted healthcare organizations prepare, design, and implement the MEDITECH Revenue Cycle suite of applications: Community Wide Scheduling, Authorization Referral Management, Admissions, Abstracting, and Billing/Accounts Receivable. Our financial team has worked with the scheduling, registration, health information management, and business office department teams to build the entire Revenue Cycle suite of dictionaries with streamlined workflows and seamless integration.

We have worked with the MEDITECH preferred vendor systems for integration with eligibility, medical necessity, and coding reimbursement suites to provide streamlined integration to the MEDITECH HCIS for accurate billing and improved denial management.

Excel will assess your current system and workflows and prepare the organization to build the system to meet all regulatory compliance standards and keep you prepared for audits to include Recovery Audit Contractor (RAC).

Excel consultants have expertise with overall Revenue Cycle assessment, integration, testing, and validation. We have managed the project timeline to have this functionality operational during the testing phase.

Now is an important time in healthcare to take advantage of the tools available for optimizing billing accuracy and minimizing denial management risk.
